

Even the sound of go-carts on the nearby CA-Speedway could not drown out the appreciative reactions of visitors to the CA-World Network Management Solutions booth. CA took the opportunity to showcase [Network/IT Pro](#), the enterprise edition, standalone, best-of-breed network management solution.

Network/IT Pro includes powerful, easy-to-use tools like the Application Response Option, the Switch Management Option, the ATM (Asynchronous Transfer Mode) Option, the Frame Relay Options, and more.

“The network is the single most important re-source for any type of business to thrive in and even to survive in today’s networked economy,” said Imran Anwar, product marketing manager for CA’s network management solutions. “As these racecars and wireless technology demonstrations show, our solutions help clients manage all kinds of devices on any kind of enterprise networks, so that IT resources are used to serve business needs.”

These Network/IT Pro tools also work with Unicenter TNG. Upcoming versions of Network/IT Pro running on Windows NT and UNIX, are being enhanced with extended database support.
